Tucson, USA | +1 (520) 2484 822 | mannkanit@gmail.com | [linkedin.com/in/kanitmann](https://www.linkedin.com/in/kanitmann) | github.com/kanitmann01 | [kanit.codes](#)

Summary

Data Analyst with 2 years of engineering and analytics experience in cloud environments and machine learning projects. Proficient in SQL, Python, Snowflake, and BI tools like Tableau and Looker Studio, skilled at building dashboards and self-serve analytics. Developed an employee transfer dashboard reducing processing time by over 90% and engineered a real-time threat intelligence platform to improve detection accuracy.

Experience

Netstar Inc. | *Machine Learning Engineer (Capstone)*

Jan 2026 - May 2026

- Engineered an enterprise-grade automated threat intelligence platform with a hybrid detection architecture that combined a FastText NLP classifier, structured ML models, and algorithmic distance rules, enabling the system to identify deceptive URLs and brand spoofing and thereby improving detection accuracy and reducing manual investigation time for client security teams
- Analyzed 1 Billion Phishing URLs, and orchestrated a containerized environment to support real-time telemetry on a live analytics dashboard, integrating NetSTAR and PhishStats APIs to dynamically enrich zero-day threat evaluation for client networks
- Developed interactive dashboards in Tableau to visualize threat intelligence metrics and enable stakeholders to monitor system performance in real time

Ericsson India Global Limited | *Engineer, Cloud and Infra*

Feb 2023 - Dec 2024

- Led the migration of 2,000+ servers to Google Cloud Platform for one of Ericsson's largest lift-and-shift projects, completing the transition ahead of schedule and reducing migration-related incidents by 30%, which improved system reliability and accelerated cloud adoption across the organization.
- Maintained 99% application functionality and service uptime during the transition by monitoring with Prometheus and applying rapid incident response, keeping disruptions minimal and staying within P1 and P2 SLA thresholds
- Implemented Cloud Cost Optimization Policy using CUD across infra to increase cost efficiency by 10% and decrease performance incidents by 50%.
- Configured and optimized DNS settings using Google Cloud DNS, lowering network latency and cutting the number of network-related tickets
- Built self-serve analytics reports in Power BI, writing complex SQL queries against Snowflake to provide stakeholders with real-time visibility into server migration performance
- Collaborated on data modeling to define key infrastructure metrics, ensuring reports aligned with stakeholder needs and upheld data quality standards

Tata Power | *Data Science Intern*

Jul 2021 - Sep 2021

- Analyzed data from 400+ employees and used outputs to launch an Employee Transfer Dashboard that was projected to impact 1000+ employees pan-India; decreased the paperwork time from 2 weeks to less than 4 hours.

Skills

- Languages & Core:** Python, SQL, C++, JavaScript, R
- Data & AI:** PyTorch, Scikit-Learn, Pandas, NumPy, PySpark, dbt, TensorFlow
- Cloud & Tools:** Google Cloud Platform (GCP), Docker, Git, Tableau, MongoDB, Excel, Business Intelligence Tools (e.g., Tableau, Power BI), KPI Development, Google Looker Studio, Snowflake
- Concepts:** A/B Testing, Causal Inference, ETL Pipelines, Generative AI (LLMs), Agile, Data Modeling
- Relevant Coursework:** Statistical Analysis, Data Mining and Machine Learning, Visualization (Matplotlib, Seaborn, Plotly, Tableau), Python (Pandas, NumPy, Scikit-learn), Introduction to Artificial Intelligence

Projects

Real-Time Twitch Analytics Pipeline | [Real-Time Twitch Analytics Pipeline](#)

Jan 2026

- Engineered an end-to-end ELT pipeline for Age of Empires II viewership by orchestrating Twitch API ingestion with Apache Kafka and Python, loading raw JSON into Snowflake, and transforming data with dbt to power Looker Studio dashboards with 60-second data freshness
- Collaborated with product stakeholders to define key viewership and engagement metrics, writing complex SQL queries in Snowflake and documenting metric definitions for consistent dashboard reporting

College Major & Wage Analysis | [College Major & Wage Analysis](#)

Sep 2025

- Processed over 45 million US Census records (IPUMS 2009–2023) using SQL and Python (Pandas) to quantify correlations between major selection and wage growth, uncovering a 40% wage premium for Computer Engineering graduates
- Developed an interactive Tableau dashboard to visualize wage trends by major and presented actionable insights to academic stakeholders to inform enrollment strategy

VoiceBridge - Real-Time Speech Translation | [VoiceBridge - Real-Time Speech Translation](#)

Mar 2025

- Developed a multilingual speech-to-speech translation app using Whisper ASR, NLLB-200, and MMS-TTS for real-time, AI-driven communication.

MindMirror | [MindMirror](#)

Nov 2025

- Developing a personal analytics platform focused on visualizing neuroplasticity and mental patterns using Python and React.
- Integrated Gemini LLM API to interpret user data and provide actionable psychological insights.

Education

University of Arizona | *Master of Science (MS), Data Science* (GPA: 3.75)

Tucson, USA May 2026

Vellore Institute of Technology | *Bachelor of Technology, Computer Science Engineering* (GPA: 3.42)

Vellore, India Aug 2023

Leadership & Awards

University of Arizona Campus Store | *Student Lead*

Oct 2025 - Present

- Manage daily store operations and student teams; lead a team of 10 students as primary lead for registers, performing supervision duties while also training members to be proficient with POS technology.

RoboVITics | *Board Member*

2021 - 2022

- Directed collaborations and outreach for the campus robotics club, impacting over 250 students.
- Organized 10+ events and workshops, including Equinox, a global MLH-partnered hackathon with 800+ registrations.
